Alpha Firmware Upgrade

Firmware Upgrade

The Firmware code of the *alpha* can be upgraded simply via the engineers port. To upgrade the firmware; press the ESCAPE button when the *alpha* is powered up. This will take you into the *Alpha Boot Block Menu*, as shown below.

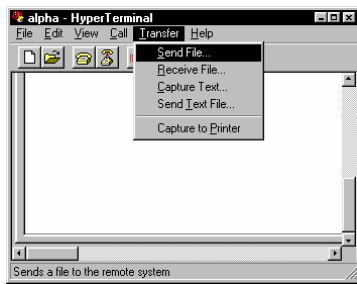

Using the Standard Windows HyperTerminal Software, Send the firmware File to the *alpha*. Configure the Properties of the serial link to the *alpha*. Chose an unused Com port on your PC and set the port settings as shown below.

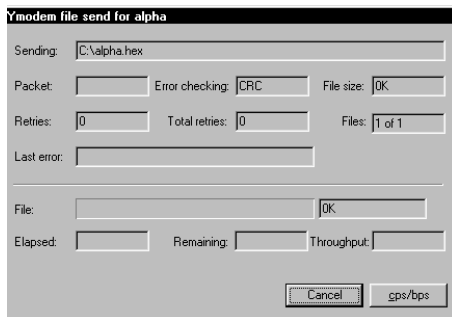

Alpha Firmware Upgrade

Go to the Transfer-Send File menu. A pop up screen will appear, select the File to Download to the *alpha* (typically alpha.hex), make sure the Protocol is set to YMODEM.

On the *alpha* front panel go to the Receive File? Screen and press the ACCEPT button. The *alpha* is now waiting for the file to be sent. Press Send on the on the Send File window on the PC

The Pop up screen shown below will appear showing the progress of the file, the progress is also shown on the front panel of the *alpha*.

When the file has been transferred, you will be asked on the front panel of the *alpha* if you wish to transfer the file to flash, press ACCEPT. The progress of this file transfer is indicated on the front panel. When the File has been transfer to flash the *alpha* will ask you if you wish to reboot press accept and the *alpha* will restart with the new firmware.
