## London Gatwick International Airport continues its 35 year relationship with Audix

London Gatwick Airport continues to choose Audix Systems as its preferred supplier for the Voice Alarm and Public Address Systems.

In March 2004, Gatwick Airport was one of the first sites to benefit from the installation of the latest CPA240 Amplifiers. Gatwick Airport replaced the existing Audix System which has been in operation for 35 years (and still functioning) with the new generation Audix Voice Alarm System, featuring the new CPA240 amplifier.

The flexibility and durability of Audix equipment is the key to the long association with the airport and the CPA240 offers increased features relevant to a major airport where the Voice Alarm System must be dependable and easily reconfigurable.

Features of the CPA240 include:

- 4 channel unit based on proven amplifier design technology
- Totally reconfigurable, including on site - dramatically reducing parts holding
- Greater level of fault information, including over temperature signal before shut down
- "Signal Present" light to assist fault finding
- Connection to Audix Alpha via ribbon buss - reducing commissioning time and easier access
- 2U height reducing rack size
- Headphone socket to listen to amplifier activity
- Power supply and amplifier modules - simpler to repair
