The Audix Assist DDA Call system provides a perfect solution for disabled toilets in buildings wishing to conform to Building Regulations Document M (access rights for the disabled) and the Disability Discrimination Act.

This simple 2 wire system has been specifically designed to meet the needs of disabled service users and conforms to all the relevant requirements including; the Disability Rights Commission code of practice, English Tourist Council recommendations and RNIB signage guidelines. The use of blue indicators, as well as a loud siren ensures a speedy response to calls.

From our research, many requests for help are due to silly things, such as people turning off the lights in a disabled toilet, leaving the user literally in the dark, so on all our call points the call LEDs blink every 2 seconds, guiding people to the points in the dark. The call points are wall mounted not ceiling pull cords; this is deliberate to prevent false calls from people confusing the call system with the light switch.

Pull cords are hard to use by people who have fallen to the floor and are difficult to locate in the dark, they often get in the way and sometimes get tied up by cleaners mopping floors, thus reducing their effectiveness.

DDA Call comes in kit form with all the basic components required for a fully compliant system. Additional parts are available separately.
